Congratulations on a successful 2019 wheat season! Planting was late, spring was cold and wet, and harvest was hot and humid, but nonetheless a high yielding success. Last year, we recommended a fungicide application on all of our wheat seed varieties, and the results were fantastic. Miravis Ace is a fungicide that can be applied at 50% head emergence all the way through flowering, giving a broader timing window with better protection.

Please call us for more information.

SY Viper is the premier wheat in our seed lineup, 4 days earlier than other high yielding varieties, but with taller straw. Viper finished at the top in various Penn State and Virginia Tech trials, showing great adaptability across all types of acres. Please call early to book Viper, as the best seed in the region will go quickly!

2019 SMALL GRAIN SEED

WHEAT

USG 3536

Bearded variety with medium maturity. Was a top yielding variety in Pennsylvania trials. Very tall plant for great straw.

USG 3316

Bearded variety with a medium/early maturity. Consistent yield, dry down and test weights. Top two and three year average yields.

USG 3329

New! Bearded variety with medium early maturity. Top 10 wheat in Maryland trials.

SY VIPER

Viper was a top yielder in 2019 trials as well as 2 and 3 year average trials.

Early maturity make it best for your double crop acres. Smooth head and tall straw height=

your best choice for every acre.

BARLEY

Secretariat

Early maturing barley with short beards that produces great test weights and high yields.

SY 547

Medium maturity with smooth head. Is reliable on all soil types. Very good disease tolerance and a consistent yielder.

SY 100

Medium maturity and smooth head that excels under high management practices. High test weights and winter hardiness. Has performed excellent in trials.
