As valuable Risser Grain customers, we would first like to thank you for doing business with us. The grain markets, weather, and planting conditions all presented challenges...but we can all agree the 2020 Wheat Harvest was a success! Prices, yield, quality, and straw length were outstanding.

For our seed lineup in 2020, we have a great mix of every trait your operation needs. ***SY Viper*** offers the best of both worlds as it is early maturing and high yielding. New to our lineup, ***SY 576*** is bearded and contains a premier disease resistance package. In addition, it was a top yielding wheat in both Pennsylvania and Maryland Trials. We also have ***four USG varieties*** that are medium/early maturing, high yielding, and adaptable to any acre.

Opportunities are available to contract 2021 wheat for over \$5.25. Please give us a call so we can help you lock in profits. Thanks again for being great customers and we look forward to hearing from you soon!

2020 Pricing	0-100	100-300	300+

576

VIPER

New! Bearded with tall straw. Contains the FHB1 gene for excellent scab resistance and overall disease tolerance. Thick stem for increased standability.

PA TRIALS: 109.6—MD TRIALS: 93.7

Excellent combination of high yielding genetics, early maturity and tall straw height. Has been a top wheat in the Mid-Atlantic for multiple years.

PA TRIALS: 100.5— MD TRIALS: 96.4

3316

3329

Bearded and medium maturity. Consistent yield, dry down and test weights. High yielding variety for several years.

PA TRIALS: 105.7—MD TRIALS: 92.4

Bearded and medium early maturity. Excellent winter hardiness and adaptability. Great choice for any acre.

MD Trials: 86.5—VA Trials: 94.3

3536

3228

Bearded and medium maturity. Tall straw. Great test weights and excellent tillering.

PA TRIALS: 108.6—MD TRIALS: 90.0

New! Smooth head and early maturity. Short plant type. Can utilize higher planting rates and nitrogen applications. Great for planting soybeans into straw residue.

2020 Small Grain Fertilizer Program

Fertilizer Recommendations

Continue to use Fungicide on wheat to increase quality and yield potential. We are also seeing increased yields from customers who use two applications of Ammonium Sulfate— one in the fall with Potash and MAP, and the other in the spring with Urea/Amidas. We also recommend adding Procote BMZ (Boron-Manganese-Zinc) in your spring broadcast program, as they are key micronutrients for growing a high yielding wheat crop.

Fall Topdress per acre:

150 lbs. of Potash

100 lbs. of MAP

100 lbs. of Ammonium Sulfate

150 lbs of Potash is critical for double crop soybeans

Spring Topdress per acre:

100 lbs. of Urea/Amidas

100 lbs. of Ammonium Sulfate

Treated with Procote BMZ

If you think the crop is lacking potassium, we can add a readily available fertilizer such as K-Mag and SOP

As the Harvest rush approaches, Risser Grain offers a complete line of input resources and marketing services to keep your operation efficient and profitable.

Various contracts, on farm pick ups and multiple delivery points for corn, wheat and soybeans

Fall can be an advantageous time to price UAN. We sell a complete line of storage tanks if you would like to fill your spring needs ahead of time

Offering cover crop and lime spreading. Can also blend Potash with cover crop wheat for an even application

In addition to Wheat and Barley Seed— we sell Rye, Orchard Grass, Timothy, Alfalfa, Oats, Clover, Pasture, and Waterway blends
